

# MarketView

by **drillinginfo**

# Proprietary Data Hub

Manage your highly sensitive proprietary data.

**The MarketView Proprietary Data Hub by Drillinginfo allows companies to store, manage, and distribute highly sensitive proprietary data from an organization's own environment while leveraging in parallel the benefits of Drillinginfo SaaS-based architecture for exchange, price reporting agency, broker, and public commodity market information.**

The MarketView Proprietary Data Hub by Drillinginfo acts as a proxy and routes all requests for proprietary data to the Hub, while dynamically redirecting all queries for traditional data to the Drillinginfo data centers. Customers of the MarketView Proprietary Data Hub may utilize in-line formulas and user defined formulas to easily blend proprietary data with traditional exchange data in all MarketView by Drillinginfo front, middle, and back office products and services.

The MarketView Proprietary Data Hub can be installed locally behind an organization's firewall or in a cloud based environment such as Amazon Web Services or Microsoft Azure. The hub includes a web service API that allows administrators to bulk load proprietary data into an ODBC compliant database such as Microsoft SQL Server or Oracle, in addition to the ability to create new folders and proprietary instruments with associated metadata to be viewed in the MarketView symbol browser. The API also provides the ability to manage end-user permissions including the ability to create groups. One group can have many users and one user can belong to many groups. Only members of the Administrator group can invoke these requests.

### Good to Know

The MarketView Proprietary Data Hub can be installed locally behind your organization's firewall or in a cloud based environment.

# MarketView Proprietary Data Hub Benefits:

## Robust API for Uploading Data, Creating Symbols, and Editing Metadata

- Easily bulk-load proprietary data into the MarketView Proprietary Data Hub via a robust Web Service API
- Create unique symbol names and the underlying meta-data associated with those symbols for expirations, currency, and unit of measure
- Leverage the API to edit your proprietary data symbol tree and create additional folders and sub-folders as needed

## Manage User Permissions

- Leverage the web service API to create groups. One group can have many users and one user can belong to many groups
- Manage proprietary data permissioning on a per-user and per-exchange basis without the assistance of the Drillinginfo Support Team
- Uniquely permission user rights for publishing, viewing, and editing of proprietary data

## Blend Proprietary and Exchange Data

- Leverage user-defined formulas to perform computational analysis on both proprietary data and traditional 'exchange' data being sourced via the Drillinginfo cloud all in real-time
- Consume proprietary data across an organization's enterprise-wide network with MarketView front, mid, and back office products and services

## Security

- Organizations manage proprietary data on their own terms behind their own firewall or via cloud-based solutions such as Amazon Web Services or Microsoft Azure
- The MarketView Proprietary Data Hub keeps a secure firewall between an organization's proprietary data and traditional data sourced via Drillinginfo
- Drillinginfo employees have no access to an organization's proprietary data or information associated with that data

PROACTIVE

EFFICIENT

COMPETITIVE

By monitoring the market, Drillinginfo continuously delivers innovative oil & gas solutions that enable our customers to sustain a competitive advantage in any environment.

Drillinginfo customers constantly perform above their competitors because they are more efficient and more proactive than the competition.
